# Alcohol Gel

All of our gel products contain a minimum 60% alcohol, anything below this percentage is proven less effective.

The key to hand hygiene is to wash your hands for 20 seconds regularly throughout the day

Alcohol gel is an interim measure when hand washing facilities are not available.

Many studies have shown that hand sanitiser containing a higher concentration of alcohol are more effective than those that contain a lower alcohol concentration or non-alcoholic one. Furthermore, many flu like contagious diseases and infections. Our hand sanitisers are available now and are delivered from our UK based warehouse.

# peracide™

visibly better

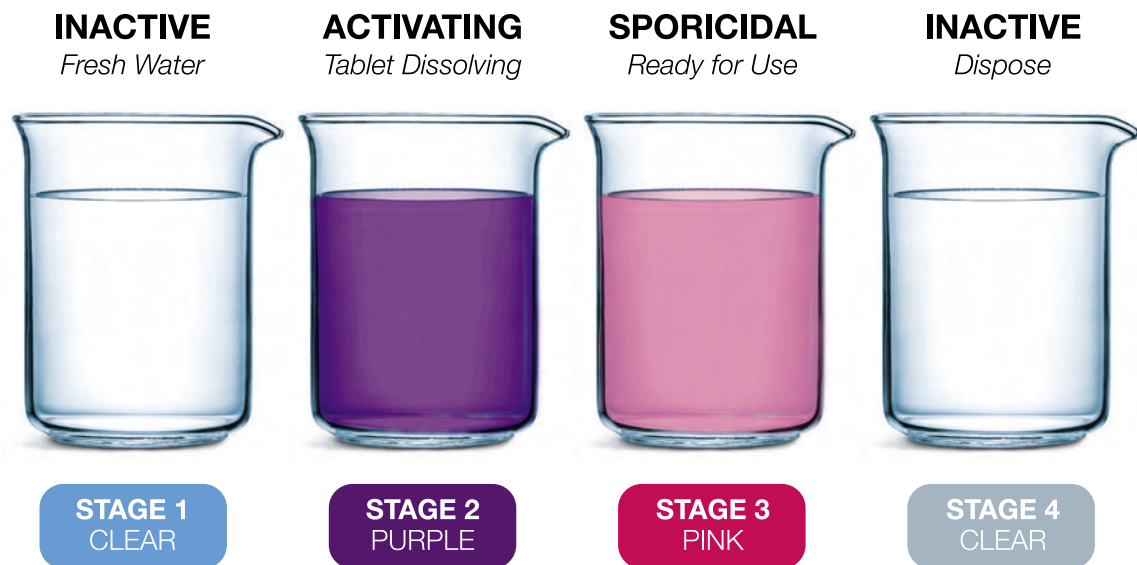

PERACETIC ACID IN SITU

## Advanced Disinfection In Colour

Ensuring the correct dosage of a disinfectant in its application is paramount to the effective result of killing pathogens. To ensure the correct dosage is achieved in every use, we have implemented explicit dilution instructions whereby accuracy and consistency are always met ensuring the desired efficacy level of the disinfectant.

Peracide tablets and wipes come with an incorporated colour activation system designed to help and alert the user of the readiness of the Peracide working solution. The solution goes through 4 states the initial state, dissolving state, active state and finally the inactive state.

Here's how it works...

City & Kent Cleaning provide both managed and Ad Hoc HPV & UVC decontamination services. Available 24hrs a day / 7 days per week services are tailored to each of our clients individual requirements.

Prior to and throughout the ongoing COVID-19 pandemic we have worked tirelessly assisting existing and new clients with a range of products, services and professional advice to help protect their staff & visitors. CK Facilities Management and City & Kent Cleaning have a wealth of experience providing decontamination consultancy along with sterilisation and disinfection services throughout the UK and beyond.

Ranging from NHS Trusts, Private Healthcare Organisations, Care Homes, Universities and numerous commercial enterprises including public and private businesses.

Our HPV services utilise Oxypharms Nocospray and Nocomax machines with Nocospray treating up to 1000m<sup>3</sup> and Nocomax up to an incredible 18,000m<sup>3</sup>

UV Light decontamination is a relatively new technique that has been deployed into the healthcare sector. Whilst the treatment is not as intensive as HPV it has one major beneficial factor – Speed!

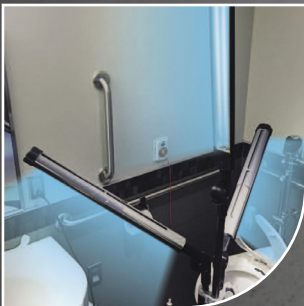

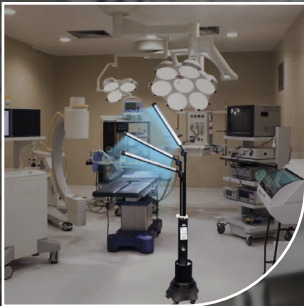

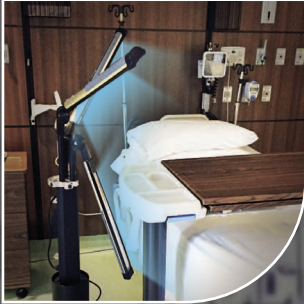

# The New Angle in Hard Surface Disinfection

**Moonbeam**

MoonBeam™3 delivers powerful UV-C light to provide fast, on-demand broad area disinfection of high-touch surfaces in as little as 3 minutes.

## Total Coverage

Three individually adjustable articulating heads, each generating a broad umbrella of intense UV light.

## Mobile Base Unit

Smooth-rolling casters allow easy movement and positioning anywhere. Heads unfold for positioning in seconds

## Remote Cover

Controls operation and acts as a sensor during disinfection to ensure safety. Cover also protects light heads and enables convenient transport from room to room.

## Environmentally Friendly

Fume-free, chemical-free disinfection application.
